

Yealink EXP50 · how to use it.

Color-screen expansion module for reception desks

Read the lamps

- 1 Each key on the module is a person, a park slot or a speed dial.
- 2 Green means free, red means on a call, flashing means ringing.
- 3 The labels live on the color screen, no paper strips.

One-touch transfer

- 1 During a call, press a coworker's key on the module.
- 2 The call goes straight to them.
- 3 Their lamp shows busy while they're on it.

We set whether module transfers announce first or go straight through. Dial 611 to change it.

Speed dial

- 1 With no call up, press any key on the module.
- 2 The phone dials that person immediately.
- 3 Works for extensions and outside numbers alike.

More pages of keys

- 1 The module holds several pages of keys.
- 2 Use the page keys at the bottom to flip between them.
- 3 We lay out the pages with you during install.

Stuck on anything? Dial 611 from any handset.
