

Grandstream GDS3710 · how to use it.

IP video door system with camera

When someone rings

- 1 A visitor presses the call button at the door.
- 2 The phones you chose ring like a normal call, video-capable phones also show the camera.
- 3 Answer to talk to the visitor.

Open the door from your phone

- 1 While talking to the visitor, press the door-open code on your keypad.
- 2 The system releases the door.
- 3 Hang up when they're in.

The open code is set per site during install, and we can limit which extensions may use it. Dial 611 to change either.

Check the camera anytime

- 1 Dial the door station's extension from any video-capable phone.
- 2 The live camera view appears, no one has to ring first.
- 3 Hang up to close the view.

Stuck on anything? Dial 611 from any handset.
